

River Scavenger Hunt

Good Morning! Before we release our salmon into stream, let's take some time to walk up and down the river to see what we can find. Salmon and other types of fish need cold, clean water to help them survive and make the long journey to the ocean. Remember our food Web-Trout are made of trees, and every part of the chain needs to be in the river for them to survive. The sun, leaves, bugs, other fish, and predators are important parts of our ecosystem.

Remember, stay with your partner at all times. Be very careful as you walk near the river!

Directions: Check off every item you see while you are walking along the edge of the river. If you see more than one, keep track of how many you see!

Scavenger Hunt Checklist

- Bug/ Insect
- Macroinvertebrate
- Leaves
- Pine Cone
- Animal (what was it?)
- Animal Track/droppings
- Flowers
- Reptile (lizard, snake)
- Fish
- Bird
